Lockout Tagout

Why Lockout Tagout?

Lockout Tagout (LOTO) is an important safety procedure - critical to safeguarding workers and employees around the machinery and equipment they operate, service and maintain. It is also a major OSHA-inspection focus. In fact, it remains one of the most cited violations for general industry even after 20 years in force. But, rather than focusing on the negative aspects of non-compliance and citations, focus instead on the benefits a thoroughly-developed LOTO program provides:

- **LIVES SAVED** – preventing an estimated 250,000 incidents, 50,000 injuries and 120 fatalities annually!
- **CUT COSTS** – both in lost employee time and insurance costs
- **IMPROVED PRODUCTIVITY** – minimizing equipment downtime
- **BEST PRACTICE** - being widely adopted across industries and industrialized countries

5 Steps To An Effective Lockout Program

A successful Lockout Tagout (LOTO) program starts with a solid foundation and a written plan. After that, proactive training and employee awareness programs will ensure a safer workplace for everyone. Brady has broken down the process for Lockout Tagout OSHA compliance into five easy steps, each with their own effective elements that add up to total workplace safety.

Step 1:
Develop and document your equipment energy control policy/program

Step 2:
Create and post written, visual equipment-specific lockout procedures

Step 3:
Identify and mark all energy control points

Step 4:
Train your employees, communicate and conduct periodic inspections

Step 5:
Equip your employees with the proper lockout tools and warning devices

OSHA Lockout Tagout Regulations

OSHA's Volume 29 Code of Federal Regulation (CFR) 1910.147 standard addresses the control of hazardous energy when servicing or maintaining equipment.

- (1) Scope. (i) This standard covers the servicing and maintenance of machines and equipment in which the unexpected energization or start up of the machines or equipment, or release of stored energy could cause injury to employees. This standard establishes minimum performance requirements for the control of such hazardous energy.

- (2) Application. (i) This standard applies to the control of energy during servicing and / or maintenance of machines and equipment.

- (3) Purpose. (i) This section requires employers to establish a program and utilize procedures for affixing appropriate lockout devices or tagout devices to energy isolating devices, and to otherwise disable machines or equipment to prevent unexpected energization, start-up or release of stored energy in order to prevent injury to employees.

1910.147(c) OSHA Energy Control Policy; Synopsis of Requirements

An energy control policy must be documented and at a minimum should cover the following aspects of the program:

- Purpose and scope of the program
- Personnel authorized to perform LOTO
- Enforcement policy
- Training methods
- Group lockout procedures
- Shift transfer procedures
- Lock removal procedures
- Method for auditing & updating procedures
- Coordination with outside contractors

1910.147(c)(4) Energy Control Procedures; Synopsis of Requirements

- Procedures must be documented and must identify the equipment covered.

- A separate procedure must be created for each piece of equipment to be locked out. There are exceptions where multiple machines may be grouped under a single procedure.

- The procedure must include specific steps for shutting down, isolating, blocking and securing equipment to control hazardous energy.

- Specific steps for the placement, removal and transfer of Lockout Tagout devices should also be included.

- The employer shall conduct and certify periodic inspections at least annually.

1910.147(c)(5) OSHA Lockout Device Requirements

Lockout devices must:

- Be provided by the employer.
- Be standardized by size, shape or color.
- Be distinguishable from locks used for other purposes. Lockout locks should only be used for lockout!
- Identify the individual who applied the lock (both tags and lock labels are acceptable for this purpose).
- Be durable.
- Be strong enough to prevent removal except by using excessive force.
- Remain under the exclusive control of the individual who attached them.

1910.147(c)(5)(ii)(B) Standardized
Lockout and tagout devices shall be standardized within the facility in at least one of the following criteria: Color; shape; or size; and additionally, in the case of tagout devices, print and format shall be standardized.

1910.147(c)(5)(ii)(A) Durable
Lockout and tagout devices shall be capable of withstanding the environment to which they are exposed for the maximum period of time that exposure is expected.

Personal Lockout Kits

Personal Lockout Kits

Personal lockout kits come equipped with keyed-alike padlocks, allowing all the locks in a kit to be opened with a single key. This simplifies key management and ensures that employees can quickly and easily find the right key. For kits containing padlocks that are keyed different (each padlock has its own unique key), see the standard lockout kits on previous pages. Or select a personal lockout kit without padlocks, and purchase the padlocks separately.

Energy Source Tags

Lockout Tagout

Energy Source Tags

Energy source tags can be used to mark your facility's points of control for energy sources. These tags help make the lockout process quicker, safer and easier.

These energy source tags are made of plastic and available with color coded and alpha numeric options. A variety of pre-printed energy source tags are available or they can be customized to meet your specific application.

• 1.5" x 3" tags are constructed with B-401 Rigid Plastic

• Rounded corners and one hole included

Energy Source Tag Guide

Brady offers a number of options based on your needs. Use the guide below to ensure that you are selecting the appropriate tag based on your application.

Lockout Tags

! OSHA Lockout Tagout Regulations

The following requirements apply only to tags used as tagout devices (i.e., tags used alone without locks). Tags used in combination with locks are not required to meet the same restrictions as tagout devices.

Tagout devices must:

- Be provided by the employer
- Be standardized by size, shape or color
- Be distinguishable from tags used for other purposes
- Be understandable to all employees
- Identify the individual who applied the tag
- Withstand the usage environment to which they are exposed for the maximum period of time that exposure is intended. Tag should not deteriorate or the message become illegible when exposed to weather, wet or damp conditions, chemical or corrosive environments.

- Employ a means of attachment that is substantial enough to prevent accidental removal. The means of attachment must be of a non-reusable type, attachable by hand, self-locking, and non-releasable with a minimum unlocking strength of no less than 50 pounds.
- Warn against hazardous conditions if the machine or equipment is energized.
- Tag shall also include a legend such as the following: Do Not Operate, Do Not Start, Do Not Open, Do Not Close, etc.

Standard Lockout Tags

Communicate safety and lockout information at the point of need with Brady's wide selection of OSHA-compliant Lockout Tagout tags. Brady's Lockout Tags come in a variety of materials and legends to suit your application needs.

How to Order Tags

1. Select from the materials below based on your application
2. Choose the tag legend for your tag
3. Order by part number for desired reverse side legend

Available Tag Materials:

Heavy Duty Polyester (B-837)

- Durable polyester laminate completely encapsulates and protects graphics
- Designed to withstand moisture, grease, chemicals and extreme temperatures
- Accepts pencil, pen and marker. Pen and marker can be completely erased using isopropyl alcohol
- Exceeds OSHA pull requirement withstanding up to 80 lbs of pull force
- 3/8" dia. heavy-duty brass grommet
- Includes OSHA-compliant nylon fasteners

Economy Polyester (B-851)

- Rigid polyester surface is easy to write on and stays legible longer than cardstock
- Exceeds OSHA 50 lb. pull requirement for tagout devices
- 3/8" dia. rolled brass eyelet accepts most padlock shackles
- Includes OSHA-compliant nylon fasteners

Cardstock (B-853)

- Cost-effective tags designed for one-time use
- Does NOT meet OSHA 50 lb. pull test for tagout devices, but can be used in conjunction with locks (see OSHA Tag Requirements above)
- 3/8" dia. rolled brass eyelet accepts most padlock shackles
- Includes attachment strings

Padlocks

Padlocks

A written plan and comprehensive training program are foundational to a successful lockout tagout program. However, having the right tools for the job is extremely important, no matter what your industry is.

Although padlocks may seem like a commonplace device, the durability and reliability of your padlocks is critical to your facility's safety. Brady provides a full line of padlocks that will withstand harsh environmental conditions, rough handling and the test of time.

Lockout Tagout

! OSHA Lockout Tagout Regulations

1910.147(c)(5) OSHA Lockout Device Requirements state that lockout devices must:

- Be provided by the employer

- Be standardized by size, shape or color

- Be distinguishable from locks used for other purposes. Lockout locks should only be used for lockout!

- Identify the individual who applied the lock (both tags and lock labels are acceptable for this purpose)

- Be capable of withstanding the usage environment and must be strong enough to prevent removal except by using excessive force with special tools, such as bolt cutters.

- Most importantly, whenever lockout devices are applied, they must remain under the exclusive control of the individual who attached them. No employee should be able to open a lock attached by someone else.
Keying & Charting Options

Keyed Different

Brady padlocks come "keyed different" when purchased from stock. This means that the key for one lock should not open another. Brady padlocks use 5- or 6-pin cylinders with keys precision machined to exacting standards. This enables us to offer a greater number of unique keys than other locks with the same number of pins, making it highly unlikely that you will ever receive a duplicate lock.

Keyed Alike

When keyed alike, all locks in a set can be opened with the same key. This option is beneficial when multiple locks are assigned to a single employee. Remember, however, that under OSHA regulations no employee should be able to open a lock applied by someone else. Therefore, keyed alike locks from the same set should never be distributed to multiple employees.
Master and Grand Master Keyed

A master or grand master key can be used to open multiple locks that are keyed differently. This allows supervisors to easily remove a lock in the event of an emergency. In order for employees to retain exclusive control, master and grand master keys should be kept in a secure location that is accessible only to management.

Key Charting

Brady can track or "chart" your key codes upon request to simplify ordering replacement locks and to avoid duplicates when ordering additional locks. There is no extra charge for charting. Call for Customer Service at 1-800-661-9983 details!

Group Lockout Boxes

Lockout Tagout

Lockout Boxes - A great idea for group lockout

For group lockout situations involving a large number of workers and equipment, lock boxes can offer a number of advantages over hasps.

How group lockout boxes work:

• Supervisor uses a single job lock on each energy control point to lock out equipment

• Keys for job locks are put in a lockout box

• Each worker applies his own lock to the lock box. As long as any one worker's lock remains on the lockout box, the keys to the job locks cannot be accessed, and the energy isolating devices cannot be operated. Each employee retains exclusive control, as required by OSHA.

How group lockout boxes can save you money and increase efficiency:

• Example: Assume 5 workers need to lock out 10 energy control points

• Using hasps, 50 locks are required (all 5 workers must apply individual locks to each control point)

• Using a lockout box, only 15 locks are required (10 job locks applied to control points and 5 employee locks applied to lockout box). That's 70% fewer locks!

• Less weight hanging from the energy point - 1 lock instead of 5!

• Finally, checking the locks on the lock box allows you to track who is still working. With hasps, you need to walk around to each energy control point to see whose lock is still in place.

Cable lockouts – GREAT VERSATILITY!

Cable lockouts provide a number of advantages. Because of their construction, cable lockouts can be used in a variety of applications locking out multiple disconnects and valves. They are also a great option for lockout of unusual energy isolating devices that cannot be effectively locked out by a traditional device. This versatility combined with ultimate portability makes cable lockout devices a great addition to any lockout tagout program.

Valve Lockouts

Lockout Tagout

Valve Lockouts

From universal valve lockouts to adjustable gate valve lockouts, Brady offers a full line of devices to shut off all types of pressured valves. Gate valve lockout devices deny access and cover the valve handle. With Prinzing ball valve lockouts and Brady's standard, quarter-turn ball valve lockout devices, a comprehensive series of options are available from the global leader in lockout tagout solutions.

Universal Valve Lockout
Lock Out all Types of Valves with a Single Device

- Made of rugged industrial-grade steel and nylon for extra impact and chemical resistance

- Versatile open ended clamp fits over most closed rings, wide handles

- Can also lock out large levers, T handles, and other hard-to-secure mechanical devices

- Cable attachment offers choice of 1/8" nonconductive nylon or rustproof sheathed metal cable

- Small: for handle widths up to 1" (max handle thickness 0.6")

- Large: for handle widths up to 1.6" (max handle thickness 1.1")

- Patent No. 5,415,017 and 7,207,198

No need for multiple types and sizes of lockouts – now one device does it all!

Use blocking arm to lock out quarter-turn ball valves.

Attach to butterfly handles to prevent trigger handle from being squeezed.

Use cable attachment to lock out gate valves.

Use two blocking arms to lock out 3-, 4- or 5-way valves, or to lock valves in the "on", "off", or "throttled" position.

Circuit Breaker Lockout

Loc™ System

- Works on wide range of breakers, including single- and multi-pole configurations
- Can be used with most padlocks by making use of unique lock rail system
- Allows panel door to be closed even when lockouts are in place
- Accommodates multiple locks, facilitating group lockout activity without hasps
- Keeps weight off the breakers, protecting delicate electrical components from damage
- Positions locks and tags outside the panel, making sure lockout activity is clearly visible to anyone in the area
- Patent No. 6,727,441

(Not recommended for use with multilock hasps)

Technical Information

- Lockout devices constructed of high-impact Isoplast polymers
- Cables are 2-ft. in length
- Lock rails made of durable isoplast polymers with acrylic adhesive backing
- Lock rails available in 4" or 8" lengths (with 7 or 15 lock loops)

How EZ Panel Loc System Works

Lockout device is unlocked by inserting and turning the black plastic key.

1. Expose the super-bond adhesive on back of rail. Permanently affix to any location on the panel.
2. Attach the lockout device to the breaker and snap into locked position.

3. Pass plastic key through lock rail and attach lock, preventing key from sliding down cable and opening lockout device.

4. For group lockouts, run key through multiple loops in lock rail and apply locks. No hasps required! (Not recommended for use with multilock hasps)

5. Low-profile lockouts allow panel doors to be closed on most breaker panels.

Covers Most 120V – 277V Breakers!

The EZ Panel Loc™ System comes in two different styles, accommodating an exceptionally wide range of breaker models.
SNAP-ON

For use on Square D NQO and other breakers that have a hole in the switch tongue. Just align pins with hole and snap closed. Pins prevent switch from being thrown.
CLAMP-ON

For use on breakers that do not have a hole in the switch tongue. Turn thumbscrew to clamp lockout securely onto switch, then snap the cover closed to prevent thumbwheel from being loosened.

Lockout Training & Awareness Aids

Lockout Tagout

! OSHA Training Requirements:

- Those who will perform servicing or maintenance (authorized employees) must be trained to:
  - Recognize hazardous energy sources and understand the energy type and magnitude
  - Identify and properly operate the applicable energy-isolating devices
  - Safely apply and remove Lockout Tagout devices
- Those who operate the machinery or work in the area where LOTO is performed (affected employees) must be trained to:
  - Recognize when Lockout Tagout activities are in progress
  - Understand the purpose of the energy control program and the importance of not tampering with Lockout Tagout devices when encountered in the workplace

- Additional training is required when using tagout instead of lockout. See Section (C)(7)(ii) in the 1910.147 standard.
- Employers must document when training took place, who attended, and the topics covered.
- Employees must be retrained under the following situations:
  - Employee assigned to new job
  - Change made to energy control policies or procedures
  - Machinery installed or modified, presenting a new hazard
  - Whenever the employer has reason to believe that there are problems with the employee's understanding or use of the procedures
- Authorized employees must undergo an annual review to ensure they fully understand their responsibilities under the program

Lockout Tagout Procedures

Written procedures are a critical piece of an effective lockout tagout program. They provide clear, visually-intuitive instructions and specific steps necessary for shutting down, isolating, blocking and securing equipment to control hazardous energy. When employees can easily understand lockout procedures, they are more likely to utilize the procedures for safe machine lockout.

Brady's software programs and procedure writing service provide you with options to complete these procedures.

! OSHA Lockout Tagout Regulations

29 CFR 1910.147 (c)(4)

Machine-specific Lockout Tagout procedures are required for equipment having more than one energy source, as well as for much equipment having a single energy source.

Clearly identifies the number of lockout points requiring attention for proper shutdown.

Facility and location are prominently stated to minimize any chance of confusion.

Step by step written instructions detail the requirements for appropriate lockout.

Incorporated images help convey the message to your entire workforce.

LINK360 Lockout/Tagout Posted Procedure

ID#:	BRDY-001-430105	Facility:	Site 1 - Refrigeration	Location:	Engine Room
Created:	9/11/2013	Description:	Refrigeration Compressor #4		
Revised:	9/13/2013				

5 Lockout Points

Note: This is an example of Link360's **"Long Form".** The long form allows you to freely define the actions of each step, add photos for each step, and add further detail that is required for complex lockout procedures. For simple lockout procedures, see the "Short Form".

Purpose:	This procedure establishes the minimum requirements for the lockout of energy isolating devices whenever maintenance or servicing is done on machines or equipment.
Scope:	This procedure shall be used to ensure that the machine or equipment is stopped, isolated from all potentially hazardous energy sources and locked out before employees perform any servicing or maintenance where the unexpected energization or start-up of the machine or equipment or release of stored energy could cause injury.
Authorization:	This procedure shall only be used by employees that have been trained as "Authorized" employees under OSHA 1910.147. Employees with the following job roles are authorized to use this procedure: <list job roles>
Enforcement:	Failure to properly follow lockout-tagout procedure may result in corrective action.

Lockout Application Process

1. Notify affected personnel. 2. Properly shut down machine. 3. Isolate all energy sources. 4. Apply lockout devices, locks, & tags. 5. Verify total de-energization of all sources.

Lockout Steps

Step #	Action	Info
1 Electrical ⚡ E-1 480V	**PROPER PPE REQUIRED:** Arc flash shield, 8 cal/cm2, class E gloves, electrical rated hardhat. The E-1 Disconnect is located to the West of the machine. Turn Disconnect to the off position and lock out. Use a Lock and hasp device.	
2 Note ⚠ I-1	For the next step, you will need to obtain a universal lock and chain device from the Lockout/Tagout Station, located on the West wall of the Engine Room.	Upon re-energization, return universal lock and chain device to the Lockout/Tagout Station.
